PRACHI PATHAK

AI/ML Engineer | Python & Full-Stack (MERN) Developer

prachipathakfeb2005@gmail.com | 7348448636 | linkedin.com/in/prachi-pathak-38989b264

CAREER OBJECTIVE

AI/ML and Python developer with hands-on experience building LLM-powered applications, including Retrieval-Augmented Generation (RAG) systems, vector search, and prompt-engineered conversational agents. Skilled in integrating and deploying machine learning models via inference APIs, backend development with FastAPI, and full-stack delivery using the MERN stack. Experienced with LangChain, vector databases (ChromaDB), Docker, and Jenkins-based CI/CD, with a focus on shipping reliable, production-ready AI features end to end.

SKILLS

AI / ML: LangChain, RAG (Retrieval-Augmented Generation), Prompt Engineering, LLM integration, Vector Databases (ChromaDB), Scikit-learn, TensorFlow, PyTorch, model integration via REST/inference APIs

Languages: Python, JavaScript, SQL

Backend: FastAPI, Django, Node.js (Express.js), REST API design

Frontend: React.js, Next.js (basics), HTML, CSS, responsive UI development

Data & Analysis: NumPy, Pandas

Databases: MySQL, PostgreSQL (Supabase)

Deployment & DevOps: Docker, Jenkins (CI/CD)

Other: JWT authentication, OOP fundamentals, MVC & API-based architecture, microservices concepts, Linux (Ubuntu), Windows

EXPERIENCE

Software Analyst – smartData Enterprises

Oct-2025 – Oct-2026

- Built and integrated AI/ML features into applications, including RAG pipelines, prompt engineering, and LLM inference via REST APIs.
- Developed backend services using Python (FastAPI) and JavaScript (Node.js/Express) for web applications.
- Designed, developed, and consumed RESTful APIs enabling communication between frontend, backend, and AI services.
- Designed and managed databases using MySQL and PostgreSQL (Supabase), with a focus on clean schema design and reliable data handling.
- Integrated React.js/Next.js frontend components with backend services for seamless end-to-end functionality.
- Used Docker for containerized deployment and Jenkins for CI/CD pipelines.
- Collaborated with team members and stakeholders to gather requirements and deliver features incrementally.

PROJECTS

Regulo AI | *Next.js, Python, PostgreSQL (Supabase), LangChain, RAG*

A regulation AI platform that automates construction and planning compliance. Users upload regional regulatory documents and interact with a RAG-powered AI chatbot, built using LangChain and vector-based retrieval, for accurate regulation queries; supports project creation by geographic area, subscription-based team management, and administrative controls.

SkyPath | *Python (FastAPI), React, LLM Integration*

An AI-powered travel management platform enabling flight search and booking, hotel and attraction discovery, an AI travel assistant, and booking history. Combines real-time travel APIs with AI-driven fallback logic to maintain functionality when external APIs are unavailable.

RAG-Based Healthcare Chatbot | *Python (FastAPI), React, ChromaDB, LangChain, Prompt Engineering*

A RAG-based chatbot that ingests symptom, medication, and Q&A knowledge documents to hold multi-turn conversations — matching reported symptoms, asking clarifying follow-up questions, and composing a final response using relevant medication information via vector search over a ChromaDB knowledge base.

EDUCATION

Bachelor of Computer Applications – University of Lucknow

2022 – 2025

LANGUAGES KNOWN

Reading/Writing: English, Hindi
